STANDARD SOLES

Standard soles are pre-made soles that are compatible with Klaveness standard lasts.
You can find different characteristics in each sole-type, for example, heel height and material composition. Selecting heel height close to your lasts' heel height will give the best results!
Discover more information about lasts and materials on our web page.

The built EVA soles displayed in this chapter have 15 mm heel height. Nevertheless, we can produce them to any heel height, or to fit any other specification you require.

Built EVA soles are highly versatile, as they fit all lasts, width and sizes. With built EVA soles, it is necessary to attach welt as a separate part of the construction. The welt colour is fitted to match the colour of the EVA sole.

The standard EVA is Shore ≈ 50 .

The milled EVA soles displayed in this chapter have 15 mm heel height. Nevertheless, we can produce them to any heel height, or to fit any other specification you require.

Milled EVA soles are highly versatile, as they fit all lasts, width and sizes.
The sole unit is milled from a block of EVA shaped according to your requirements. When an EVA sole is milled, there is no need for a separate welt, and the wall in the milled EVA acts as a cup to conceal some of the height visible in finished footwear. EVA sole unit is produced without layers of material and glue.
The standard EVA is Shore ≈50.

Milled EVA soles benefits:

- Conceals shoe volume by adding depth to the sole.
- No need to add a separate welt - it is milled from the same EVA piece as the midsole. Less glued layers result in a more flexible and appealing sole.
- Overall, results in a more lightweight sole.
- Adapts to any last - even with different lasts for left and right foot, you can achieve a similar design.
